

One piece aluminum frame, spool and side plate. The aluminum is super strong and rigid T6061 aircraft grade. Manufactured from solid bar stock, machined, burnished and gold anodized to achieve perfect corrosion resistance and appearance.

Two-speed shifting system for easy switching the gear ratio. Features high speed and low speed gear ratio. At an instant you can change to a lower or higher gear ratio to get the best performance while fighting fish.

Drag materials are of aircraft grade which features anti high temperature, anti-friction, anti-corrosive, providing a strong and smooth drag power.

Multi Anti-reverse mechanism for better durability. The unique anti-reverse pawl diminishes the amount of interval points in this anti-reverse system, providing better durability.

sealed stainless steel ball bearings
4 Japan made s/s bearings are used to gain the best in smoothness and reliability, all positioned in the most crucial positions to hold peak performance (each 2 positioned in spool and drive shaft.)

Stainless steel gears / shaft.
The gears along with the drive shaft are made from anti-salt treated stainless steel, specially tempered and hardened for maximum strength.

130

Adjustment area
Micro-adjustment design, easy to use for flexible line winding.

Refilling hole: Easy refilling design, you can refill the oil any time for better smoothness.
